Engineering student in computer science with a passion for artificial intelligence. I enjoy building practical projects using Python and C, and I am always looking to learn new tools. Responsible and motivated, I am eager to apply my skills to real-world projects and grow as a developer.

Education

- Master's Degree in Engineering – Digital Sciences, ENSEEIHT, Toulouse
  September 2026 - Present
- BAC +2 (CPGE MP2I/MPI), Lycée Hoche, Versailles
  September 2024 - July 2026
- BAC Général (Mathematics and Physics & Chemistry), Lycée Polyvalent Thomas Edison, Lorgues
  September 2021 - July 2024

Academic Project - TIPE

- Solar Dynamo Numerical Simulation, Lycée Hoche
  January 2025 - July 2026
  For this project, I created a Python simulation to model the Sun's magnetic cycle using the Babcock-Leighton model. I used mathematical equations to study how magnetic fields move and why solar cycles repeat over time. Finally, I presented my technical approach and results to a panel of examiners.

Volunteer Work

- Service National Universel (SNU) & Mission d'Intérêt Général (MIG), France
  July 2022 - June 2023
  As part of my Universal National Service (SNU), I completed a community mission focused on helping children with disabilities. I created inclusive activities, managed group safety, and worked closely with a team to organize a successful day for them.

Programming Languages

- C, Python, Ada, Java, PHP, SQL, HTML/CSS

Tools & Workflow

- Environments & Systems - Windows, Linux, MacOS, AI

Core Computer Science & Engineering

- Algorithms & Data Structures: Optimization, complexity analysis, trees, graphs, stacks/queues

Soft Skills & Professional Strengths

- Problem Solving, Teamwork & Collaboration, Technical Rigor, Adaptability
